Single Point Mooring Ancillaries

Since the very beginning of the 60's Resinex has been the first World manufacturer of SPM ancillaries.

Deep Water Floats For Spm Systems

Used on Calm Buoys and Salm Buoys (SPM), FSO and FPSO. These floats were invented and developed by Resinex in the early sixties. Originally manufactured in PVC, now they are rotationally moulded in PE and filled with high density PU. Dimensions and features ruled by OCIMF specifications. Resinex has the widest range producing its Hinged Type, Grooved Type and Bolted Type.

Pick Up, Pendant And Chain Through Buoys

Used in the oil fields, these buoys come from the origin of the oil industry at sea. They can be in rigid polyethylene or in soft polyurethane.

Floats For Break Away Coupling

Very crucial product for the safety of SPM lines, our floats for break away coupling are able to fit any type of BAC. They have a special movable adaptor designed by our technical department.

Floating Reducers And Floating Y Pieces

Floating oil pipe connections from one line to other two lines or floating reducers from high diameter lines to a smaller line. Manufactured under OCIMF rules using high quality and safety welding procedures.

Winkerlights

Lights for the safety of SPM surface hoses.

Lace-On Hawser Floats

Flexible floats for offshore hawsers and ropes. Produced in PE foam covered with PVC fabric. Adaptable to all rope diameters.
